

"Does Uploading More TikToks Mean More Followers? The Data Will Shock You!"

TikTok is one of the hugest platforms of the 21st century. It is a way for content creators to post different types of content such as lifestyle, fitness, food, dance, music. The following data discusses the top 100 tiktok accounts that people followed, and their interactions including uploads, likes, followers, and following.

An uneven distribution of content creation among various follower groups is displayed in the Mosaic Plot of Followers vs. Uploads. While high-follower influencers (>100M) often have a lower number of uploads, influencers with low follower numbers (<50M) are more uniformly distributed throughout all upload frequency levels. This means that tiktokers with a big following rely on their loyal fanbase for interaction and viral material rather than consistently posting. These findings show that, depending on an influencer's positioning and reach, several content tactics can be effective on TikTok.

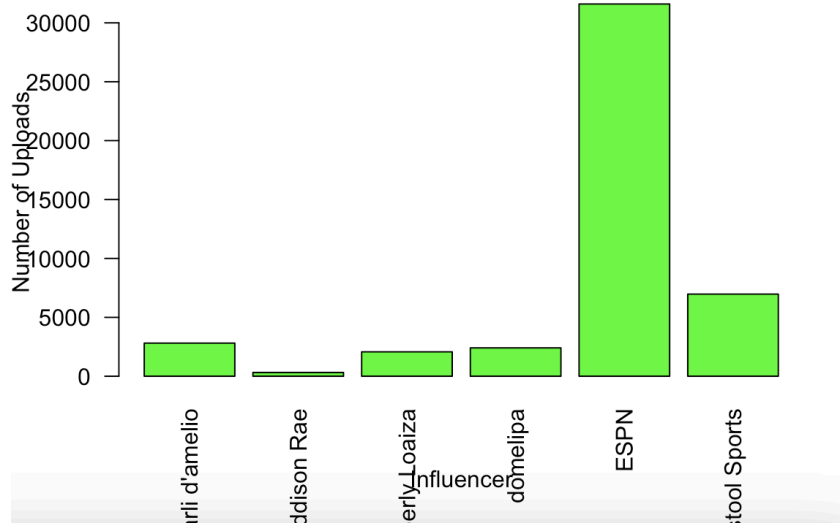

"Why Small TikTok Creators Upload More Than Big Influencers—The Secret to Growth!"

The TikTok dataset research shows several interesting trends regarding influencer interaction and content performance. Top influencers' upload activity varies significantly, as seen by the Upload Distribution for Influencers with 4B+ Likes (Bar Chart).

Surprisingly, ESPN has a significant amount of uploads compared to a majority of influencers, so regular content publishing can generate enormous interaction. This implies that to stay visible, institutional or media-based accounts can depend on volume.

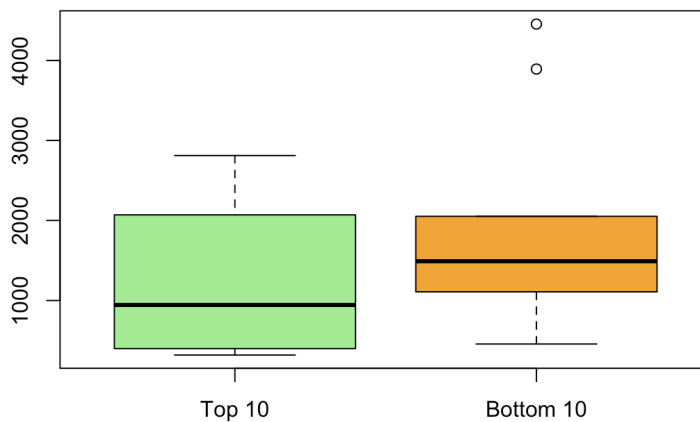

Upload Distribution for Influencers with 4B+ Likes

The difference in upload activity between top and lower-tier influencers is further shown by the Uploads: Top 10 vs. Bottom 10 Influencers (Box Plot). The median upload count for both groups is comparable, but there is more variation among the top 10 influencers, some of whom have noticeably larger upload counts. The outliers in both top 10 and bottom 10 show that it doesn't matter how much the top 10 influencers post due to the high interaction on the videos.

"You Won't Believe How Many Videos the Biggest TikTok Stars Actually Post!"

Uploads: Top 10 vs. Bottom 10 Influencers

In conclusion, I learned that consistently posting doesn't always mean success. Some influencers barely make content but still get massive engagement because their content

is highly shareable and due to their loyal fanbase Meanwhile, others rely on constant uploads to stay visible. This just proves that there's no single formula for success on TikTok, what matters is a moment of virality and loyal fanbase.
